

GitHub Submission Process

School of Computer Science

Do's

vs

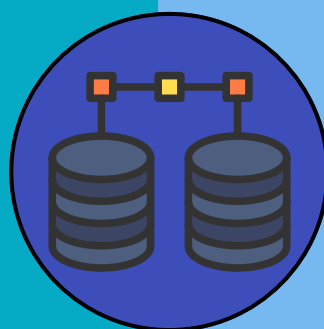

Dont's

REPO

Always use the repo provided by your campus.

For this link, please refer to the module on Arc or speak to your lecturer.

Don't use your own repo that is private or public

NB! Public repos can be viewed by other students. Private repos will not be marked.

COMMITTS

Make sure to commit through the IDE/GitHub desktop/CMD.

Make sure your commit naming conventions makes sense, is clear and applicable to what you are saving.

This is a formal message that is visible to the marker.

Make regular commits to ensure that your work is always backed up (version control is NB!!!)

The commits are there to help you track your work (making use of version control correctly)

Don't upload files directly to GitHub.com and/or Zip Files.

Don't use inconsistent naming conventions, slang or short names when naming your commits.

Don't only commit once and don't label your commit that is not clear to what you are committing - specifics are important.

FACULTY OF SCIENCE
& TECHNOLOGY

Do's

vs

Dont's

BRANCH

Make sure that you always leave your final work in the master/main branch aka the default branch.

Don't submit your final version between branches/random branches. Your lecturer will not know which is the main branch.

ARC

You need to make sure that you are submitting the full GitHub link for your repo on Arc.

As well as any links to recorded video material that needs to be submitted for your assessment.

Don't only submit on GitHub. The marker will not be able to find the submission if the link is not available on Arc.

You must submit as per the instruction on the PAS- to submit on both Arc and GitHub

Please do not submit ZIP files. Only the links mentioned on the left should be submitted on Arc.

Important Information

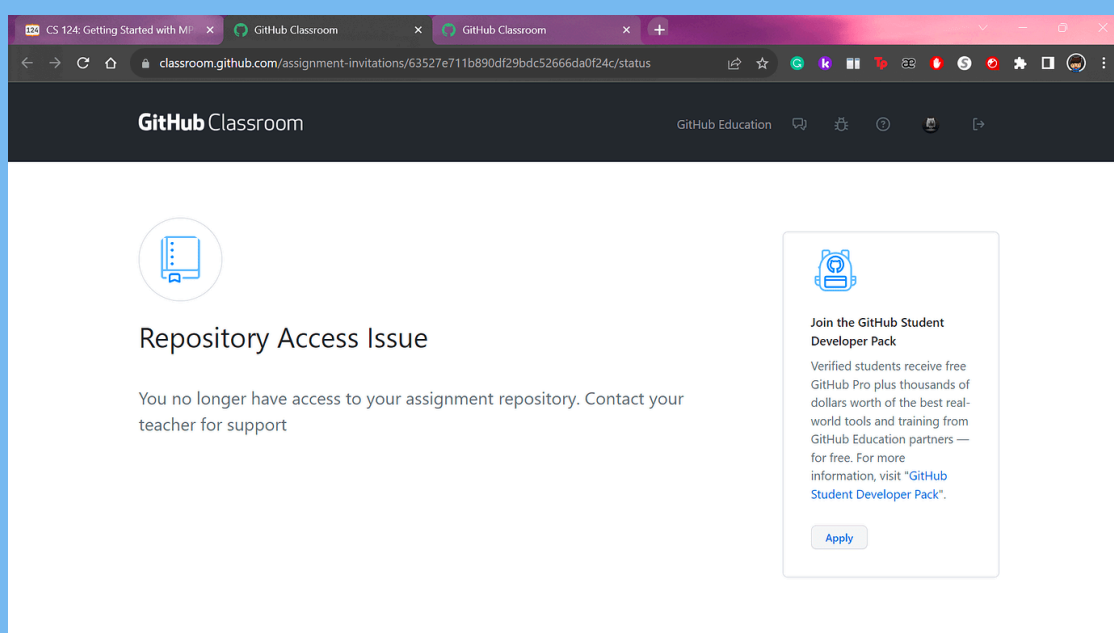

Having Repo access issues?

Check for a pending organization invitation.

- Go to your GitHub Home.
- Click your profile picture, then select Settings > Organizations in the left sidebar.
- Look for the classroom's organization and click Accept on any pending invitations.

Manually accept a repository invitation via email.

- In some cases, due to newer security settings, you may receive an email with a direct link to the repository that requires explicit acceptance.

NB! Please ensure to refer to the assessment rubrics for modules that require GitHub assessment submission as negative marking may occur for not pushing your assessment to GitHub correctly.
